# WEATHER
DRESSER

Mobile App Design Document

Weather Dresser tells you what to wear everyday based on the real-time weather. Melbourne is famous for its unpredictable '4-seasons-in-a-day' weather, every Melbournian can relate to how important it is to check real-time weather every morning before we go out so we can pick the right clothes. To save your time in every rush morning, you will be shown matched outfits images according to different weather conditions a real-time so to avoid wearing the wrong outfit for the day.

Features

We all have that weather app that tells you the weather but we probably do not have one that tells you what to wear. So other than simply telling you the weather forecast, Weather Dresser also gives you inspiration about what you should wear for the day, aka "OOTD". User will be displayed the local weather at the launch screen then to hit "the See My OOTD" to see the outfit inspiration that we mixed and matched for you based on the specific weather. Not a fan of the inspiration? User can also hit the "Show Me Another" button for more outfit ideas. Of course, user will also be able to select specific city manually and swipe to the right to see tomorrow's weather.
